

## Summary Report - Lester

Test item: [Formy \(formy-project.herokuapp.com\)](https://formy-project.herokuapp.com)

For more details please find the detailed test report in “reports/report.html” and logs in “logs/logfile.log”.

The test result suggests the following actions to be taken:

- To clarify the intentions of the form page.
  - What is the form used for? Is it to fill the user’s particulars?
- Clarify any special rules for the fields following the intention.
  - Are all the fields required to be filled before submission?
  - Is the date field meant for the user’s date of birth?
  - Are there any character restrictions on the text fields?
- Suggestions on the field behavior following the intention.
  - Should there be only one selected option for both radio buttons and the checkbox for the highest education level and sex field respectively?
  - Should the previously selected radio button be automatically unchecked if the user selects other options?
  - Do we want to change the checkbox for the sex field into a radio field instead to minimize the chances of multiple checkboxes being selected due to human error?
